

MAKING AN ENTRANCE... YOURS QUICK, SECURE, RELIABLE & ATTRACTIVE

Speedgate Xentry 3 with pedestrian access

THE ACCESS TO YOUR PARKING

Safe and comfortable living and working requires safe and comfortable access to parking. An attractive access which can blend seamlessly into your complex. An access which is above all, reliable and easy to use, but also ensures no unauthorized entry. A Speedgate has all these characteristics, unlike overhead, segment or roller door systems. A Xentry Speedgate stands out due to its added reliability, safety, convenience, burglar-resistance and design.

FAST, A Speedgate opens and closes up to 10 times faster than other door entry systems. Speed provides convenience, but also security because unauthorized persons have less time to enter your property.

SILENT, A Xentry Speedgate is equipped with a high-quality motor, bearings and gear box which work almost silently. In addition, the Speedgate has a ground-fixed assembly system. This prevents airborne noise and sound transmission (impact sound) to surrounding homes or offices.

POLICE CERTIFICATION OF BURGLAR RESISTANCE, Xentry Speedgates can be produced to a RC5 level (SKG ★★★★★) of burglary resistance and supplied with an SKG certificate. This allows you to display a police certification on your garage complex.

SAFE FOR CHILDREN AT PLAY AND USERS, a Speedgate is a stand-alone machine that can work safely in any environment, be it playing children or shoppers. HTC is deeply committed to safety. Xentry Speedgates are therefore certified for personal safety by the German test institute TÜV.

24/7 ASSURANCE & SERVICE, Xense connects Xentry Speedgates with the internet. This ensures that users, managers and service partners have real-time support in using the Speedgate. See back for further explanation.

LONG SERVICE LIFE AND LOW COST, The combination of Dutch craftsmanship, quality components, excellent steel protection and smart maintenance technology ensure low costs during the long service life of a Xentry Speedgate.

SPEEDGATE & SAFETY

To meet the stringent TÜV certification for personal safety, the Speedgate includes, among others, the following items.

- ① safety contact edges that ensure personal safety when doors are closing.
- ② safety contact edges that ensure personal safety when doors are opening
- ③ photoelectric cells for personal safety
- ④ ⑤ loops for vehicle detection
- ⑥ traffic light

24/7 ASSURANCE & SERVICE

The function and performance of a Xentry Speedgate can be monitored online. It gives you 24/7 assurance of fast service and excellent operation.

Increased reliability and lower maintenance costs can be achieved during scheduled preventive maintenance, by early replacement of parts that are probably going to breakdown before the following scheduled maintenance.

A fault can be quickly resolved because the manager is immediately informed of what is wrong, what he can do about it and whether HTC will be required to rectify the fault. If you wish, the user can be kept fully informed.

Xentry Speedgate, securely connected to the internet

HTC service 24/7 real-time insight & support

the manager has real-time insight and can get advice about repairs and maintenance

service partners receive advice and support about (preventative) maintenance

users have an up-to-date access and are kept informed about performance and current status.

DESIGN & ARCHITECTURE

Xentry Speedgates can be fully adapted to the architecture of the building.
