

MAKING AN ENTRANCE... WORK

Trackless Speedgate Xentry STS

YOUR ACCESS TO YOUR INDUSTRIAL PREMISES

Efficient and safe handling of heavy traffic requires fast, but also secure access to your industrial premises. An attractive entrance to your property, that most importantly allows access to those who should be there, but denies access to those who shouldn't. A Speedgate has all these characteristics, unlike sliding and swing gates. A Xentry Speedgate stands out due to its added reliability, safety, convenience, burglar-resistance and design.

FAST, a Speedgate opens and closes up to 10 times faster than other gate entry systems. Because it opens and closes as fast as a barrier, the combination of barrier and sliding or rolling gate can be replaced by one product, a Speedgate.

SECURITY, a constantly closed access is the best investment for improved security. There is no "inviting open door" and the quick closure action keeps your premises fully protected.

24/7 ASSURANCE & SERVICE, Xentry gates can be monitored in real time. It means 24/7 insight for managers and users on the status and performance, and immediate action by the appropriate maintenance partner if necessary. See back for further explanation.

HIGH PERFORMANCE, a fast gate with a large span allows a high flow of vehicles. The outstanding reliability of our products ensures that the access to your company premises will always function to incredibly high levels of efficiency and security.

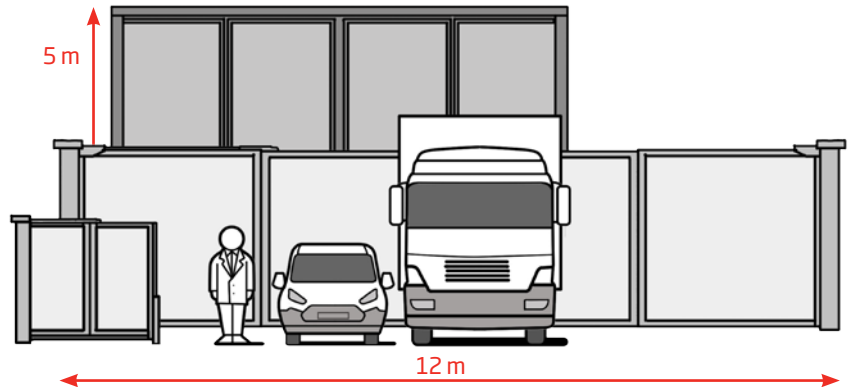

LONG SERVICE LIFE AND LOW COST, the combination of Dutch craftsmanship, quality components, excellent steel protection and smart maintenance technology ensures low costs during the long service life of a Xentry Speedgate.

PROVEN SOLUTION FOR YOUR SITUATION

Are you looking for a proven solution to your particular situation and purpose? With around 3000 Xentry Gates already sold, it is a proven solution for your commercial requirements.

- With a vehicle entrance up to 12 m wide and 5 m high, the largest Speedgates in the world
- Combination with doors for pedestrian access
- Solutions for cyclists and motorcycles
- Physical (RC4, RC5) and digital security options

In every project you will be advised and guided

24/7 ASSURANCE & SERVICE

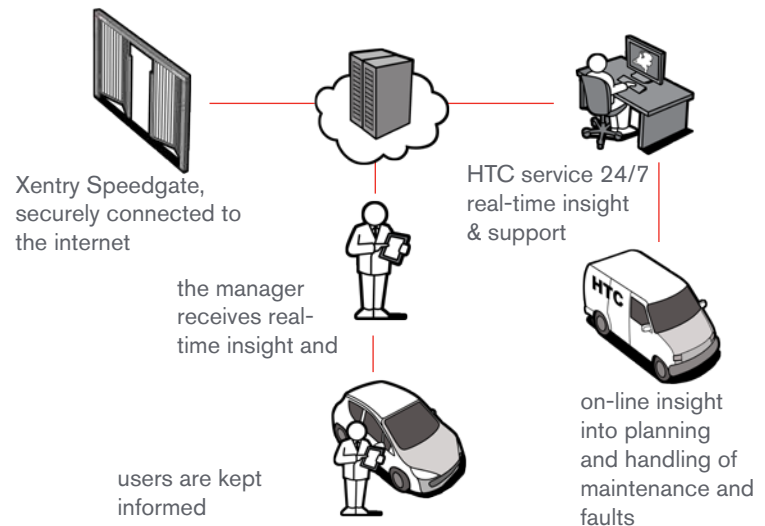

The function and performance of a Xentry Speedgate can be monitored online. It gives you 24/7 assurance of fast service and excellent operation.

Greater reliability and reduced maintenance costs can be achieved by annual preventative maintenance with early replacement of parts that are likely to breakdown before the following scheduled maintenance.

A fault can be quickly resolved because the manager is immediately informed of what is wrong, what he can do about it and whether HTC will be required to rectify the fault. The user is kept fully informed.

DESIGN & ENTRANCE our experts at HTC will advise you on the design of an optimal vehicle entrance for your location
