

MAKING AN ENTRANCE... SMART

SMART CITY SMART BUILDING SMART ENTRANCE

Speedgate Xentry 3 with Xense, ready for a smart future

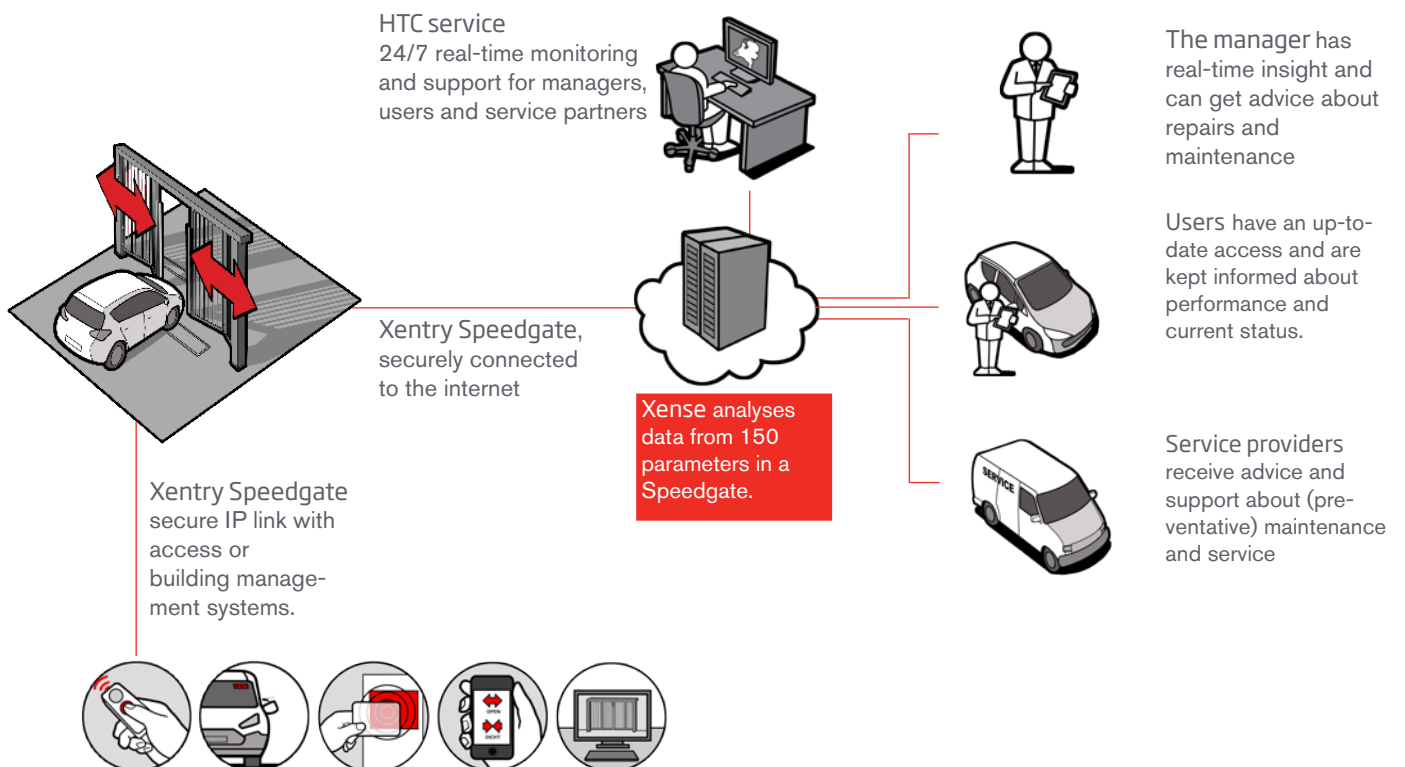

MAKING AN ENTRANCE... SMART

Safe and comfortable living and working requires safe and comfortable access to parking. An access which informs, gives peace of mind and reduces costs. An access which is above all, reliable and easy to use, but also ensures no unauthorized entry.

XENSE, A WORLD OF POSSIBILITIES

Xense connects Speedgates and vehicle entrances with the internet and ensures that users, managers and service partners have real-time support in using the Speedgate. This gives a host of opportunities to increase reliability and ease of use and to reduce maintenance and management costs.

XENSE, WHAT DOES IT MEAN FOR YOU

Management

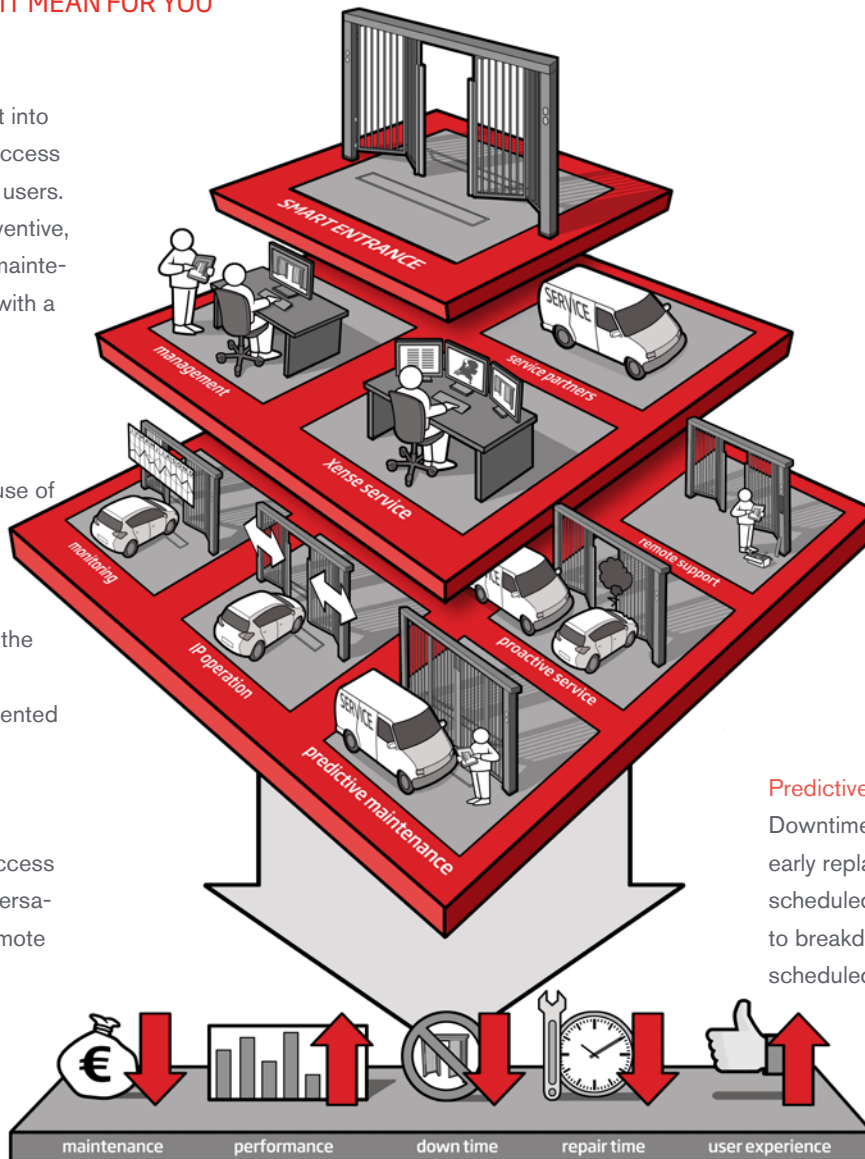

Managers gain an insight into the performance of the access and the behaviour of the users. They are advised on preventive, corrective or reparative maintenance, and are handled with a minimum of effort.

Monitoring

Gaining insight into the use of the Speedgate is the basis for our advice on proper use, security and maintenance. Using the Speedgate as a sensor platform offers unprecedented opportunities.

IP operation

Coupling with modern access control systems makes versatile usage and secure remote operation possible.

Service partners & Remote support.

Service partners are given advice about the maintenance operations to be carried out and can be remotely supported by a specialist who is watching the system in "real-time".

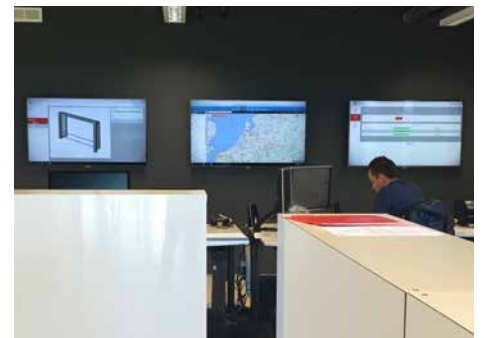

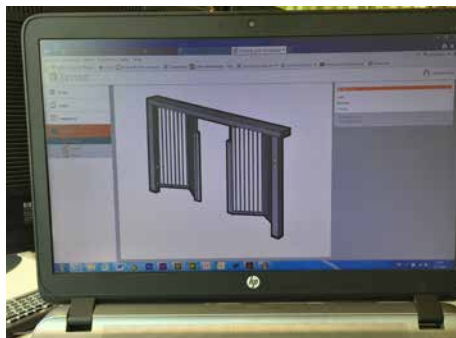

Proactive service

A malfunction or a collision is immediately detected and remotely diagnosed. A prepared service partner can repair the gate quickly. Moreover, it is absolutely clear what happened by capturing and combining sensor and video data.

Predictive maintenance

Downtime is avoided and costs saved by early replacement of components during a scheduled preventive service that are likely to breakdown before the following scheduled service.

XENSE IN OPERATION status and performance of a Speedgate is visible 24/7 in real-time on apps and in the HTC service centre
